

🔍 FORENSIC INCIDENT REPORT

Confidential — For Authorized Personnel Only

Case Number: IR-20260619-0004

Report Date: June 19, 2026

Prepared By: Incident Response Team

Classification: RESTRICTED / CONFIDENTIAL

1. Executive Summary

This report summarizes a forensic investigation into **3** security incident(s).

- **0** CRITICAL severity incidents
- **2** HIGH severity incidents
- **2** automated alerts triggered
- **3** IOCs collected
- Primary category: **Unclassified** (3 incidents)

Overall Risk Posture: **MODERATE**

2. Incident Classification

ID	Severity	Type	Category	Timestamp
#3	MEDIUM	PCAP Analysis	Legitimate Tool Abuse	2026-06-19T12:07:02
#2	HIGH	DDoS Attack Suspected	Legitimate Tool Abuse	2026-06-19T10:04:57
#1	HIGH	PCAP Analysis	Legitimate Tool Abuse	2026-06-19T09:51:52

Showing up to 50 incidents.

3. Chain of Custody

Chain of Custody Statement

All digital evidence was collected, preserved, and analyzed in accordance with standard forensic procedures.

Evidence ID	Collection Date	Collected By	Method	Status
E-3	2026-06-19T12:07:02	IR System v2.0	Automated Capture	Preserved
E-2	2026-06-19T10:04:57	IR System v2.0	Automated Capture	Preserved
E-1	2026-06-19T09:51:52	IR System v2.0	Automated Capture	Preserved

Evidence last verified: 2026-06-19 12:19:58

4. Digital Evidence

ID	Source IP	Destination IP	Port	Packets	DNN Score
#3	54.193.240.194	192.168.100.128	54643	1171	0.515
#2	49.47.93.118	192.168.1.100	80	54220	0.705
#1	None	None	None	1	0.514

Showing up to 20 evidence records.

5. Indicators of Compromise (IOCs) & Threat Intelligence

Type	Value	Confidence	Incident
IP_ADDRESS	Multiple sources	HIGH	#2
DOMAIN	DDoS attack pattern	MEDIUM	#2
IP_ADDRESS	None	MEDIUM	#1

Total IOCs: 3

6. Investigation Timeline

Chronological sequence of incidents:

2026-06-19 09:51:52 HIGH Incident #1: PCAP Analysis

2026-06-19 10:04:57 HIGH Incident #2: DDoS Attack Suspected

2026-06-19 12:07:02 MEDIUM Incident #3: PCAP Analysis

Showing last 30 events.

7. Analysis & Findings

Detailed findings for each incident:

Finding #3: PCAP Analysis

MEDIUM

Category: Legitimate Tool Abuse

Explanation: Analysis of network traffic from a PCAP file. No specific threat pattern was identified by the DNN, but activity may still require review....

Root Cause: Traffic pattern analysis from captured packets.

Timestamp: 2026-06-19T12:07:02.569438

Finding #2: DDoS Attack Suspected

HIGH

Category: Legitimate Tool Abuse

Explanation: A large volume of traffic from multiple sources is flooding the target, causing denial of service. This pattern matches a distributed attack designed to exhaust server resources....

Root Cause: Coordinated botnet sending high-rate packet floods to overwhelm network bandwidth.

Timestamp: 2026-06-19T10:04:57.410576

Finding #1: PCAP Analysis

HIGH

Category: Legitimate Tool Abuse

Explanation: A high security event has been detected. The DNN classified this as 'Suspicious' with a threat score of 0.51....

Root Cause: Unusual network activity detected by DNN analysis.

Timestamp: 2026-06-19T09:51:52.354544

Showing up to 10 findings.

8. Forensic Artifacts

Forensic artifacts extracted:

#3 – Network Artifacts

Source IP: 54.193.240.194
Destination IP: 192.168.100.128
Port: 54643
Packet Count: 1171
DNN Label: Suspicious
Threat Score: 0.515

#2 – Network Artifacts

Source IP: 49.47.93.118
Destination IP: 192.168.1.100
Port: 80
Packet Count: 54220
DNN Label: Malicious
Threat Score: 0.705

#1 – Network Artifacts

Source IP: None
Destination IP: None
Port: None
Packet Count: 1
DNN Label: Suspicious
Threat Score: 0.514

Raw logs preserved for chain of custody.

9. Remediation & Recovery Actions

Recommended remediation actions:

- Step 1: Review the packet capture for any suspicious activity.
- Step 2: If no threats found, archive the capture for future reference.
- Step 3: Continue monitoring network traffic.
- Step 1: Enable rate limiting on your firewall immediately to drop excess traffic.
- Step 2: Block the top source IP ranges identified in traffic logs using firewall ACLs.
- Step 3: Contact your ISP to activate upstream DDoS scrubbing / traffic filtering.

- Step 1: Log the event for further investigation.
- Step 2: Review logs for additional context.
- Step 3: Monitor for recurrence.

10. Recommendations

Security improvements recommended:

- Deploy a CDN with built-in DDoS protection (e.g., Cloudflare, AWS Shield).
- Review and harden your security posture.
- Implement continuous monitoring.
- Implement real-time monitoring to complement periodic captures.
- Enable traffic anomaly alerts on your router and edge firewall.
- Conduct regular security assessments.
- Configure automatic IP blacklisting triggered by packet-rate thresholds.
- Regularly capture and review network traffic.

11. Post-Incident Review

Post-Incident Review Summary

- **Total Incidents Reviewed:** 3
- **Critical/High Incidents:** 2
- **Review Status:** In Progress
- **Lessons Learned:** Improved monitoring and faster response recommended.

12. Legal & Compliance Notes

Regulatory and Compliance Considerations

- **Data Breach Detected:** NO (0 incident(s))
- **Notification Required:** Not applicable
- **Evidence Preservation:** All evidence preserved per forensic best practices.
- **Confidentiality:** This report contains sensitive security information.

13. Appendices

Appendix A – Incident Summary

Full incident data: `incidents_log.json`

Appendix B – IOC List (CSV)

```
Type,Value,Confidence,Incident ID
ip_address,Multiple sources,high,2
domain,DDoS attack pattern,medium,2
ip_address,None,medium,1
```

Appendix C – System Information

- Report Generated: 2026-06-19 12:19:58
- System Version: 2.0

- Total Incidents: 3
- Total IOCs: 3

Prepared By: Incident Response Team**Date:** June 19, 2026

Reviewed By: _____ **Approved By:** _____

This report is based on available digital evidence and system logs. Findings are preliminary and subject to change upon further investigation.
